

Configuration Orchestrator for D365 Finance/SCM

Automate Environment Configuration
with Precision and Control

Overview

Configuration Orchestrator for D365 by Axtegrity is an advanced ISV solution that streamlines the environment configuration process for Microsoft Dynamics 365 Finance and Supply Chain. Designed by implementation experts, it transforms manual, spreadsheet-driven imports into a fully orchestrated and automated workflow.

Key Features

1. Sequenced Imports

Define and execute complex configuration imports in the correct order automatically.

2. Smart Placeholders

Parameterize data for multiple companies to maintain consistency and eliminate duplication.

3. Multi-Version Entity Loads

Load different versions of the same entity in one run — ideal for cross-subsidiary configuration management.

4. Direct-to-Table Loads

Handle exceptions where DMF entities don't exist by supporting direct database table loads.

5. Centralized Monitoring

Track import status, validate results, and ensure auditability through a single dashboard.

Benefits

- Accelerate Deployments: Cut configuration time by up to 70%
- Reduce Errors: Standardize processes and eliminate manual manipulation
- Improve Governance: Maintain full visibility and repeatability
- Simplify Refreshes: Reuse configuration packages across environments with ease

Ideal Use Cases

- Environment setup during new implementations
- Golden configuration refreshes
- Data migration and validation
- Multi-company rollouts

Why Axtegrity

As a Microsoft Solution Partner specializing in Finance & Supply Chain, Axtegrity Consulting understands the challenges of environment management from the ground up. Configuration Orchestrator reflects our commitment to delivering efficient, repeatable, and modernized implementation solutions.

Technical Requirements

- Microsoft Dynamics 365 Finance and Supply Chain Management
- SharePoint
